(54) Title: IP-BASED CALL ESTABLISHMENT

(57) Abstract: There is disclosed a communication system (102) adapted to establish a communication between at least two end-points, comprising: a control server (106) for receiving a request including an identifier of a calling number of one end-point and an identifier of an action, and adapted to transmit said request in XML format in dependence upon said action, a switching control server (108) for receiving the request in XML format; an IP router (110) operating under the control of SIP messages from the switching control server (108); the IP router (110) being controlled for establishing a first communication link to the calling number of the one end-point; wherein the switching controller (108) further controls the IP router (110) to connect the established communication link to the other end-point.
